Outline

Introduction

What is semantic segmentation   https://www.youtube.com/watch?v=

Problem statement

Given the simulator train a network, that can perform well in a real duckietown environment

Environment description

- Duckietown enviroment
- LGSVL Simulator
- ROS2

Significance of Research

- Hands-on Deep Learning research
- Algorithms and techniques that are actually used in self-driving vehicles
- Possible contribution to ROS2 platform, which is currently under heavy-development

Proposed solution

Proposed solution

Proposed solution

SAY DEEP LEARNING
ONE MORE TIME

- Hack the simulator to change the textures

Proposed solution

- Hack the simulator to change the textures
- Get the training data

Proposed solution

- Hack the simulator to change the textures
- Get the training data
- Train the network

Proposed solution

- Hack the simulator to change the textures
- Get the training data
- Train the network
- ?????

Proposed solution

- Hack the simulator to change the textures
- Get the training data
- Train the network
- ?????
- PROFIT!!!

Proposed solution

- Hack the simulator to change the textures
- Get the training data
- Train the network
- ?????
- PROFIT!!!

Possible SW architecture
